

NOVA Gas Transmission Ltd.

Subject: Active Pressure, Temperature Service – Segment #8 – CENT Update

A customer had approached TransCanada with a request for higher pressure at the January Creek Interconnect Meter Station. In order to facilitate this, a connection to the NPS 48 Edson Mainline high pressure line was required. The customer requesting the modification is being charged the incremental costs associated with TransCanada's change in operation. Given that there are no other receipt or delivery stations connected to the NPS 48 Edson Mainline, there were no anticipated pressure changes to receipt or delivery stations in the area.

This service was effective for April 1, 2006 and expires March 31, 2026.
