

# Transportation Services – CR

## Canadian Mainline Transportation Services: Capacity Release (CR)

Access Alternate Markets off the Great Lakes Gas Transmission System if you Hold a Longhaul FT Contract

### Key Features and Benefits:

- Provides you with flexibility to access markets off the Great Lakes Gas Transmission System at no extra charge.
- If you are a firm shipper with Firm Transportation (FT) service from Western Canada to the Eastern Zone or adjacent export points, TransCanada will release the capacity on Great Lakes Gas Transmission to you while still providing firm capacity between Empress and Emerson. (This works similar to a diversion accessing Great Lakes delivery points.)
- Subject to the capacity availability

### How to Obtain This Service

- Sign a Capacity Release Agreement with TransCanada.
- For each specific Capacity Release arrangement, first check with the Volume Planners. If given the go-ahead, then submit Exhibit "A" specifying the details of the service requested. This binds you to the arrangement. TransCanada then uses this documentation to obtain the necessary transfer of capacity on Great Lakes.
