

Western Canada Winter 2012 Supply/Demand Outlook

Cynthia Loke

Observations

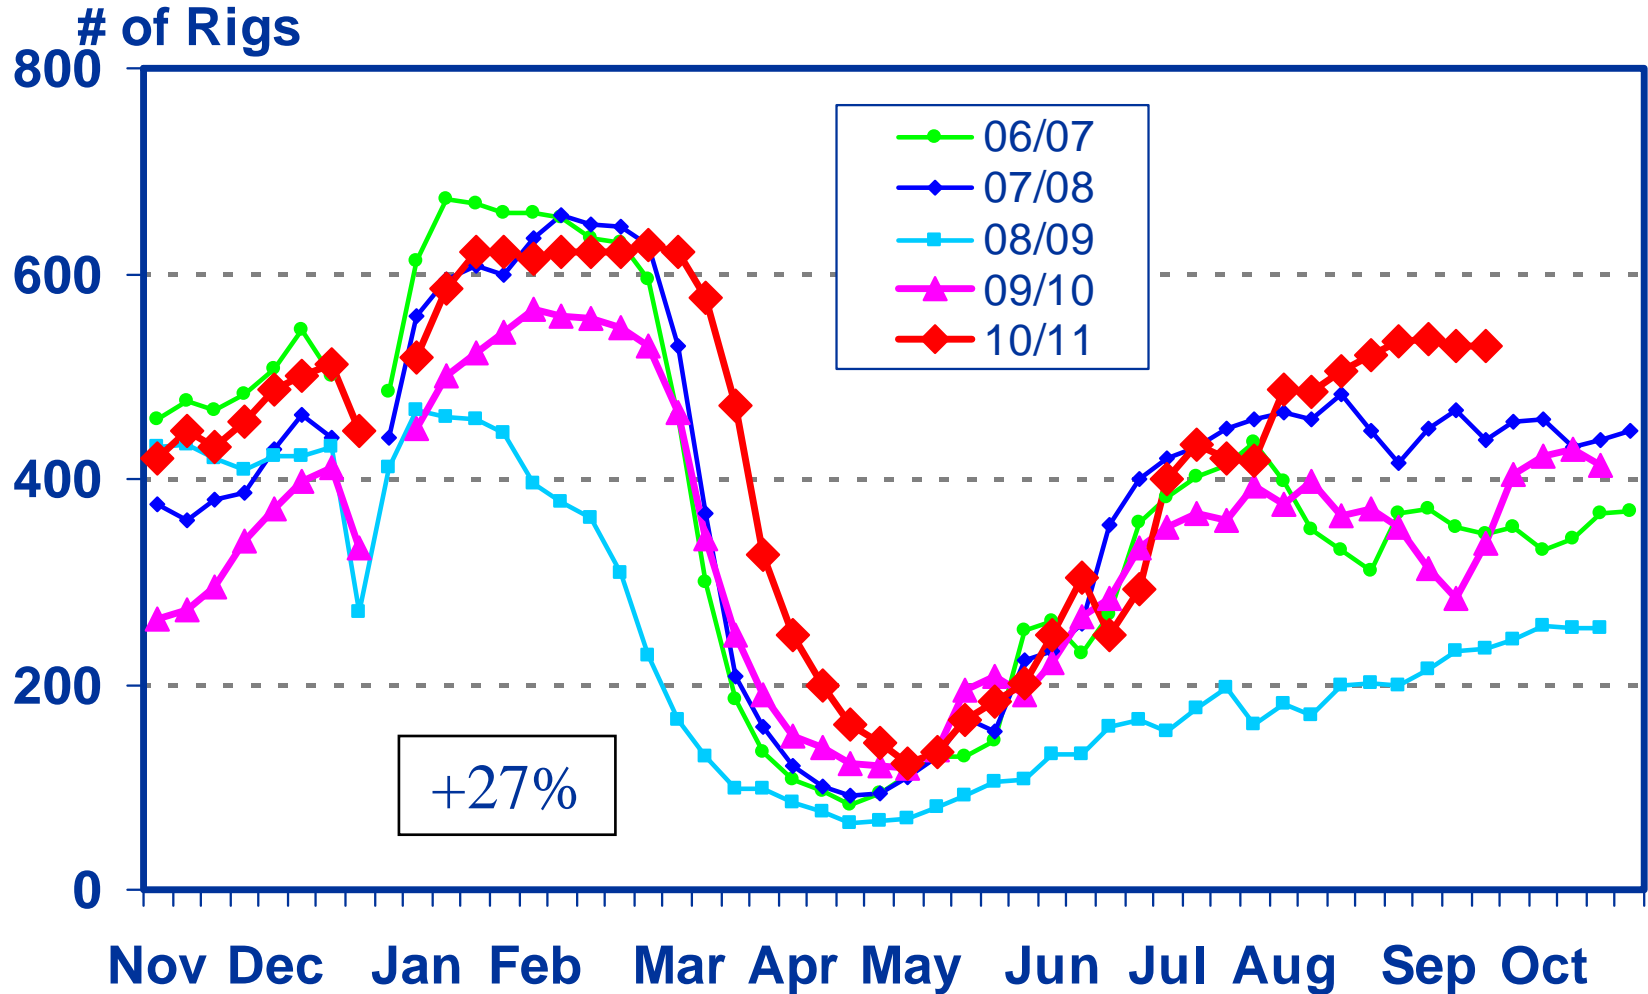

- **WCSB gas drilling is the lowest in 15 years**
 - However new well productivity continues to increase due to horizontal drilling
- **US supply growth continues to pressure AECO/NIT prices**
 - Storage injections are providing support to gas prices
- **Western Canada storage levels could be at record high levels by the end of summer**
 - Record high injections to date
- **WCSB exports are expected to decline this winter**
 - Due to market competition and increased WCSB demand

AECO/NIT Gas Prices

WCSB Active Drilling Rigs

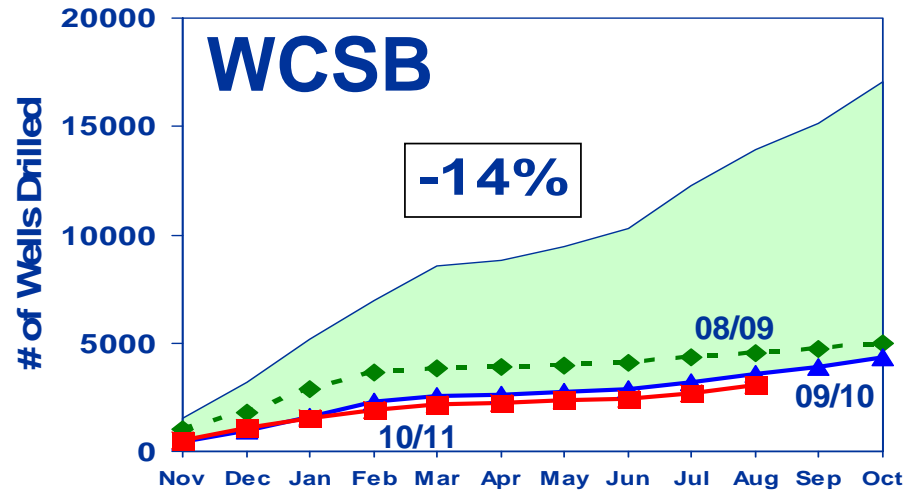

Data to Sept. 9

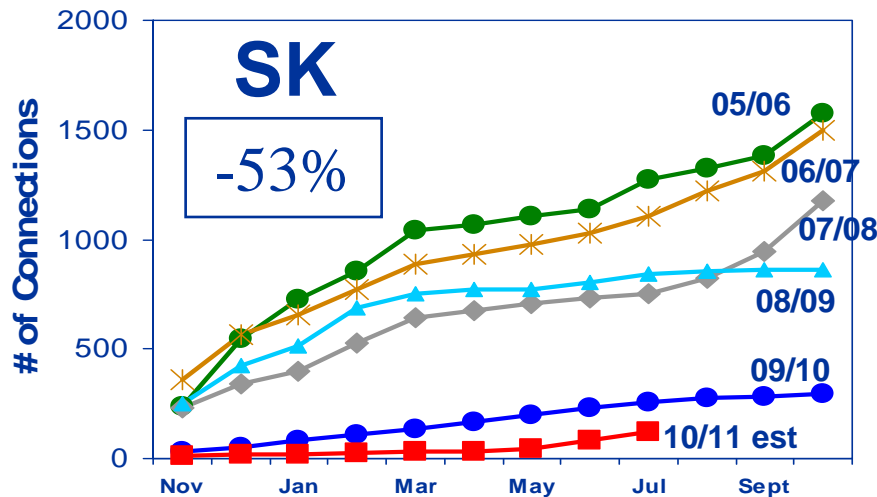

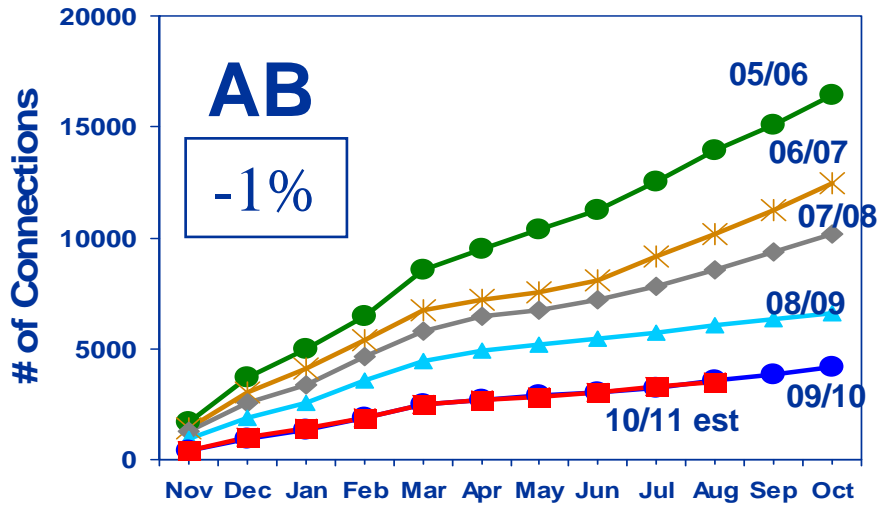

WCSB Total Wells Drilled/Month

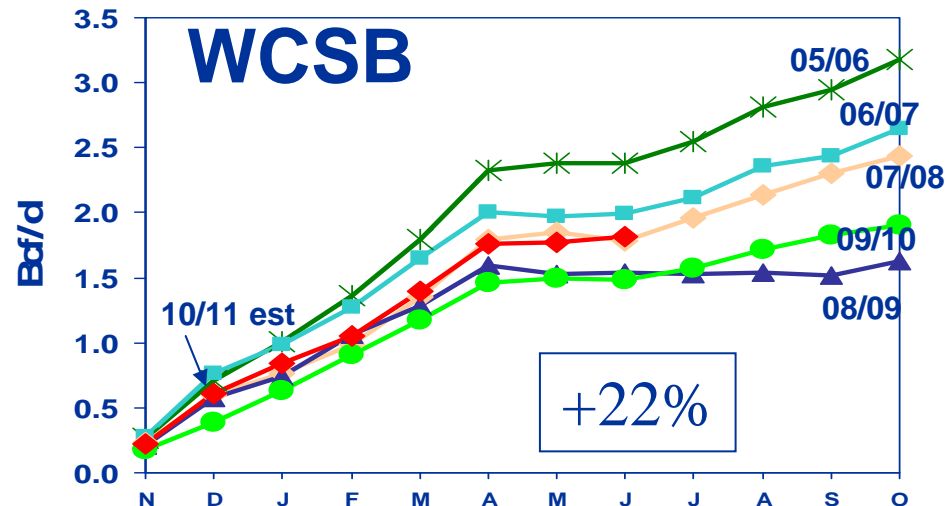

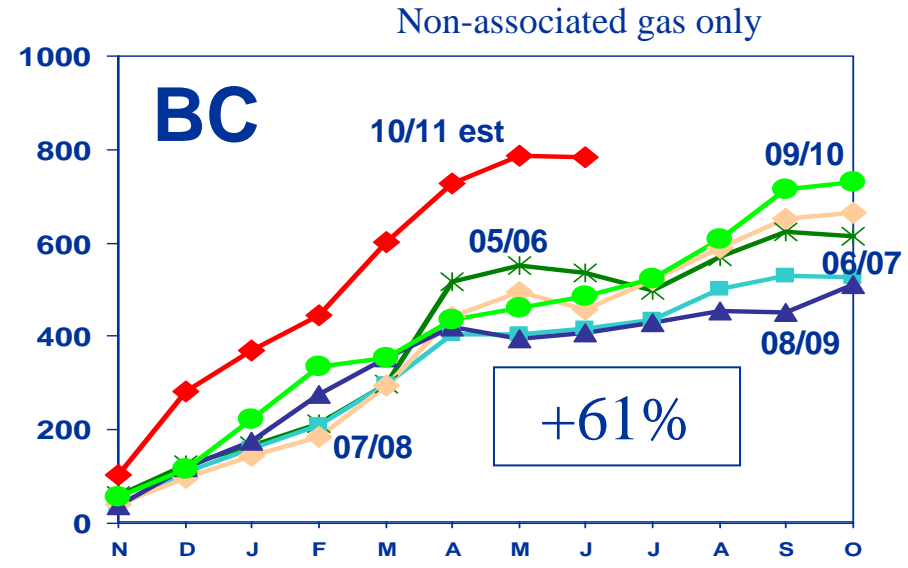

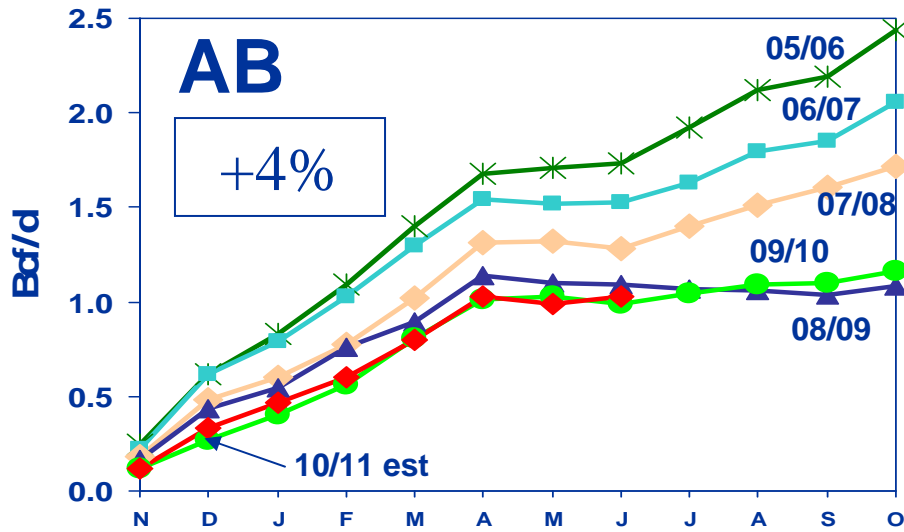

Cumulative Gas Wells Drilled By Province

Cumulative Gas Well Connections By Province

New Tie-in Supply By Province

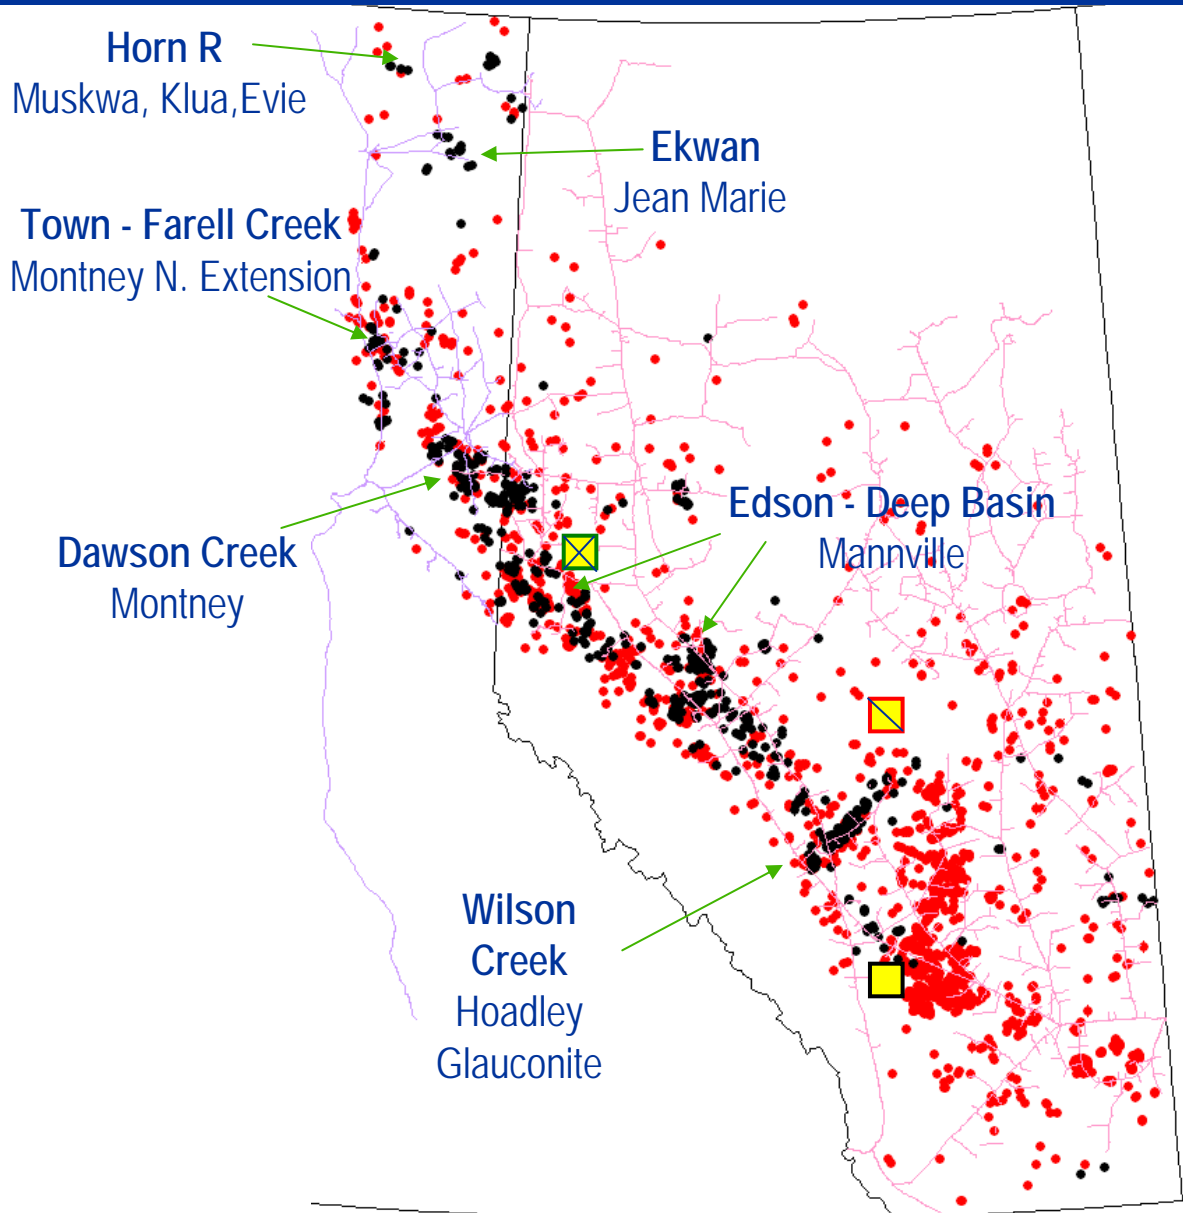

New supply is higher despite decline in drilling due to stronger well productivity.

Horizontal Gas Wells Drilled By Province

2011 Gas Well Completions

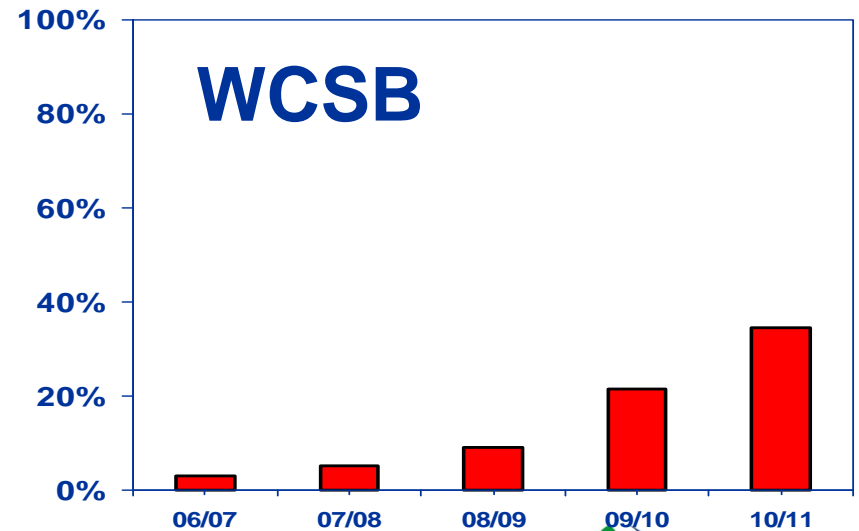

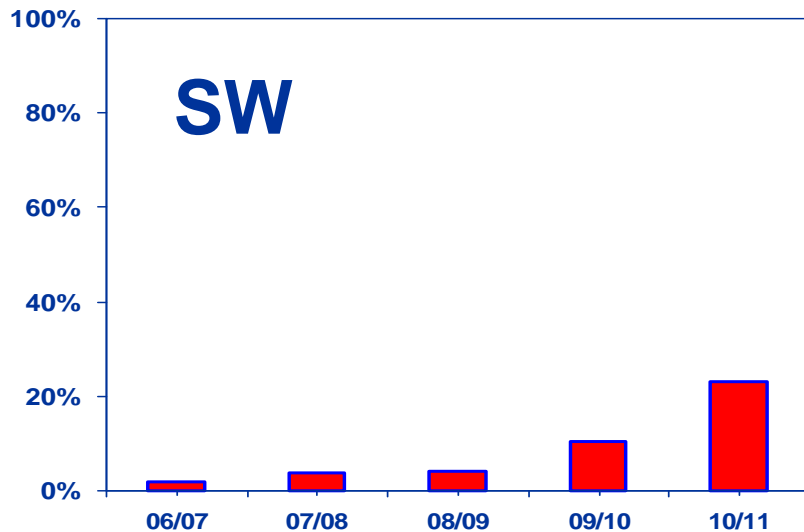

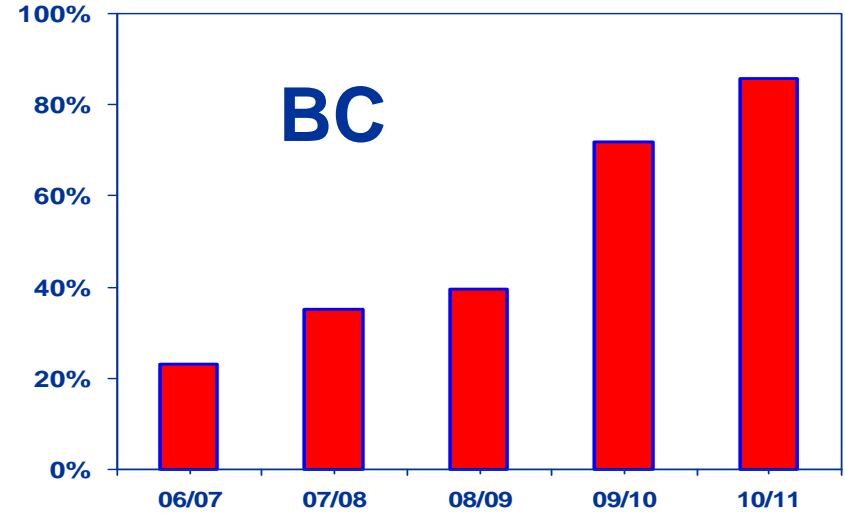

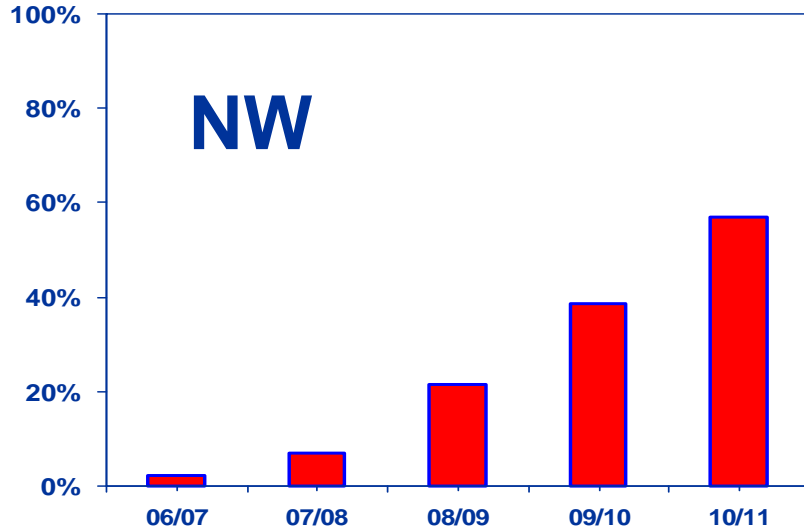

- Vertical gas completion
- Horizontal gas completion

- TransCanada Pipeline
- Spectra Pipeline

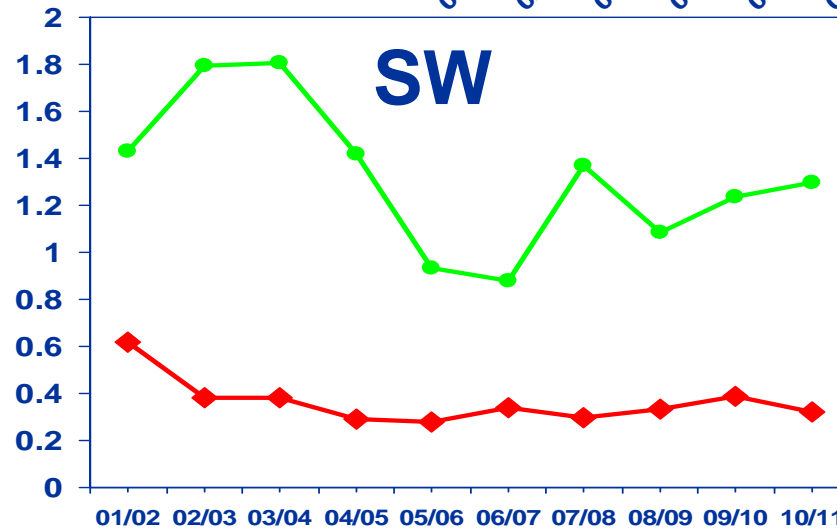

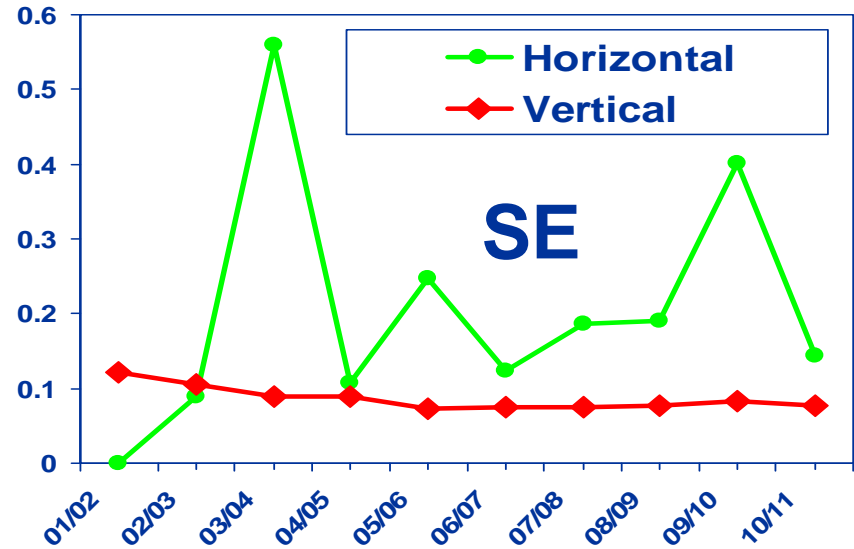

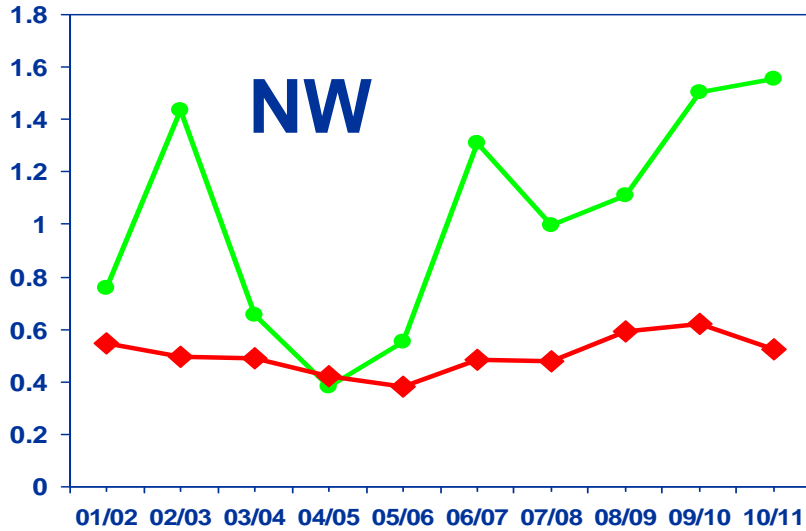

- ▣ Grande Prairie
- ▣ Edmonton
- ▣ Calgary

Conclusions

- WCSB supply expected to be flat in 2011, 100-300 Mmcf/d growth expected in 2012.
- WCSB demand expected to grow 200 Mmcf/d driven by increased oilsands demand.
- Initial well productivity (IP) will continue to grow with the increase in horizontal drilling.
- Throughput on the Alberta System is expected to average 10.2 – 10.5 Bcf/d this winter compared to 10.1 Bcf/d last winter (including ATCO flows).
- Unconventional gas supply development will contribute to supply growth in the next few years.
